Senior Full Stack Engineer | Java · Spring Boot · React · TypeScript · Angular | AWS Solutions Architect

Java/Spring Boot • React 18/19 • Angular • TypeScript • GCP · AWS • Bilingual EN/FR

SUMMARY

- 9+ years shipping full-stack features for tier-1 clients (Rolex, Société Générale, AXA, Natixis) — deep React 18/19 and TypeScript frontend expertise backed by Java 17/21 Spring Boot backend applying DDD, SOLID, and Clean Architecture; both React and Angular in simultaneous production use at Rolex
- Track record of replacing manual processes with platforms: built a dynamic risk-assessment questionnaire at Société Générale that increased security officer velocity 30% in 3 months; architected a React micro-frontend on AEM at AXA; designed a Java 21 BFF normalising Salesforce data at Rolex — each from a blank slate
- Consistent technical leadership: migrated 10 backend applications from OAuth2 to Okta (backend + frontend, zero downtime), led Angular v9→v16 and AngularJS→Angular 7 migrations, onboarded offshore teams in India, Vietnam, and Morocco, and mentored backend developers into frontend
- AWS Certified Solutions Architect (Dec 2025); GCP production deployments at Rolex; Docker, Kubernetes (pod management, log monitoring), ArgoCD, GitLab CI/CD. Bilingual EN/FR (native French). Télécom SudParis (Grande École)

CERTIFICATIONS

AWS Certified Solutions Architect – Associate | Amazon Web Services

December 2025

PROFESSIONAL EXPERIENCE

Rolex SA

Dec 2023 – Present

Senior Full Stack Engineer – Software Factory | Remote

Stack: React 18 & 19 · Zustand · Angular 9–16 · TypeScript · Java 17 & 21 · Spring Boot · Spring Security 6 · MySQL · MongoDB · PostgreSQL · Salesforce API · Okta · OAuth2 · JWT · SOAP · GCP · Kubernetes · Docker · ArgoCD · GitLab CI/CD · Claude Code · GitHub Copilot

Software Factory supporting the full B2B retailer journey — watch ordering, sale, guarantee card generation, and card management — for 200+ retailers worldwide, deployed on GCP with Kubernetes and GitLab CI/CD.

- Maintained and extended a multi-module legacy Java project for warranty card management; migrated the full codebase from Java 17 to Java 21; added JUnit/Mockito unit tests systematically while resolving production bugs; supported the tech lead with technical requirements analysis and estimation in a full Agile 2-week sprint setup with BA and PO
- Designed and built a Java 21/Spring Boot BFF that curates messy Salesforce API data into clean, typed REST contracts consumed by a React 19/TypeScript/Zustand frontend built from scratch; applied DDD, Clean Architecture, and SOLID throughout; integrated with legacy SOAP APIs across internal system boundaries
- Migrated 10 backend applications from OAuth2 to Okta — designed the identity strategy, implemented Spring Security 6 token flows and JWT, built frontend auth flows (route guards, silent refresh) across both React and Angular — zero downtime across 200+ B2B dealer accounts
- Led Angular v9→v16 migration (standalone components, lazy loading, bundle reduction); managed MySQL and MongoDB schemas across multiple team projects; performed GCP production deployments and environment configuration; cut production bug reports 40% through Jest/RTL and JUnit coverage additions

Société Générale

Jul 2022 – Nov 2023

Senior Full Stack Engineer – Cybersecurity IT Unit | Remote

Stack: React 18 · TypeScript · Java 17 · Spring Boot · PostgreSQL · Kubernetes · Docker · SG hybrid cloud (Azure-adjacent)

Cybersecurity IT department — internal risk assessment platform for Société Générale's global application portfolio.

- Designed and built from scratch a dynamic conditional questionnaire platform: Java 17/Spring Boot backend served question/answer logic to a React 18/TypeScript frontend where subsequent questions appeared or disappeared based on prior answers; output was a multi-dimensional criticality score (security, availability, fault tolerance) used to guide IT budget allocation across SG's worldwide application portfolio — replaced a manual Excel process and increased security officer velocity 30% within 3 months of launch
- Owned Docker/Kubernetes deployment and production operations on SG's internal hybrid cloud (Azure-adjacent) — managed pods, monitored logs, resolved every production bug reported; raised Jest/RTL coverage from near-zero to 80% via TDD; drove 20% adoption growth; mentored a backend Java colleague in React fundamentals

AXA Insurance

Jan 2021 – Jun 2022

Senior Full Stack Engineer – Digital Insurance Portal | Remote

Stack: React 18 · TypeScript · Adobe Experience Manager (AEM) · OSGi · CSS-in-JS · Angular Material · Storybook · Java 8 · Spring Boot · PostgreSQL · AWS

- Designed a React micro-frontend architecture on Adobe Experience Manager (AEM): built whole feature components shipped as npm.js libraries consumed by the CMS, preserving AEM's hot-update capability while keeping it headless — motivated by a SAFe Agile setup with 6 feature teams sharing a codebase; used Storybook for component testing and design validation

- In parallel, built a shared design system with presentational components synchronised with the design team — adopted by 3+ squads (30% velocity improvement); led a small team to deliver the policy termination self-service feature under a business accelerator unit, enabling clients to exit contracts without calling or visiting an agency (30% improvement in self-service engagement)
- Debugged and fixed OSGi/Java 8 backend bugs in AEM; helped craft the first backend microservice with the tech lead, deployed on AWS — the first step in a broader microservices migration initiative

Société Générale

Mar 2019 – Dec 2020

Full Stack Engineer – Compliance IT Division | Hybrid

Stack: React · TypeScript · Java 8 · Spring Boot 2 · PostgreSQL

- Built an alert management system for financial trading compliance — used by compliance officers to analyse millions of trading alerts via React/TypeScript dashboards with real-time filtering; collaborated with the Big Data team for data synchronisation; rewrote a broken legacy React class-component application to functional components and hooks, adding test coverage from 0 to 75% via TDD; onboarded and technically led an offshore team in India (code reviews, best practices mentoring); active usage climbed 25%

Natixis

Aug 2018 – Mar 2019

Full Stack Engineer – Financial Services | Remote

Stack: AngularJS · Angular 7 · Angular Material · Bootstrap · TypeScript · Java 8 · Spring Boot · PostgreSQL

- Hired to lead AngularJS→Angular 7 rewrite of a public B2C personal loan application; identified messy custom CSS, proposed Angular Material and Bootstrap redesign with a multi-step progression bar — the CEO of Natixis's financial branch praised the redesign and it drove increased adoption post-launch; mentored the backend tech lead into Angular 7 development; maintained Java 8 Spring Boot monolithic backend; submissions +20%, satisfaction +40%, zero production disruption

Capgemini

Jun 2016 – Jul 2018

Junior Full Stack Consultant | Paris, France

Stack: Backbase · AngularJS · Angular 2 · TypeScript · Java 6 · Spring Framework · PostgreSQL

- Orange Bank: part of the first team building Orange Bank's greenfield banking app, working on the subscription journey using Backbase and AngularJS within a feature team of 6 (one of 10 teams total); onboarded a Vietnam offshore team to take over the subscription area; spent one month in Morocco as on-site frontend lead to onboard a local team. Crédit Agricole: added features to the client portal (Angular 2 frontend, Java 6 backend)

TECHNICAL SKILLS

Backend: Java 6, 8, 17, 21 · Spring Boot (incl. Spring Boot 2) · Spring Security 6 · Spring Data JPA/Hibernate · OSGi · REST · SOAP · OAuth2/Okta · JWT · DDD · SOLID · Clean Architecture · Node.js/NestJS (active project)

Frontend: React 16–19 · Next.js 14 · Angular 2–16 · AngularJS · TypeScript (strict) · JavaScript (ES2022+) · Zustand · Redux Toolkit · RxJS · Angular Material · Bootstrap · Tailwind CSS · CSS-in-JS

Platforms: Adobe Experience Manager (AEM) · Backbase · Salesforce API · Storybook

Identity & Security: OAuth2 · Okta SSO · Spring Security 6 · JWT · RBAC · session management

Databases: PostgreSQL · MySQL · MongoDB · Redis · Supabase

Cloud & DevOps: AWS (Solutions Architect certified: EC2, S3, Lambda, RDS; SNS, SQS, DynamoDB — certified) · GCP (production) · Kubernetes · Docker · ArgoCD · GitLab CI/CD · GitHub Actions

Testing: Jest · React Testing Library · JUnit · Mockito · Jasmine/Karma · TDD

AI Tools: Claude Code · GitHub Copilot · JetBrains AI Assistant — daily use across full SDLC

EDUCATION

Master's Degree in Computer Science and Engineering

2014 – 2016

Télécom SudParis (Grande École) | Paris, France

LANGUAGES

French (Native) · English (Fluent / Professional) · Arabic (Native)
